

ISO27001 micro boot camp

The ISO27001 information security standard may seem like a huge amount of effort to implement, but this effort will be rewarded. We will start with a short introduction to the standard and its implementation to understand the basics. The major part of the micro boot camp will be a highly interactive micro implementation of the standard done by every member of the audience. The results are a basis for an information security system and it's up to you to grow this into a full implementation.

About the speaker

Dirk Maij, CISSP - Onyx Cybersecurity bv

Dirk Maij has over 15 years of experience in software engineering and quality management working for top 10 companies in the Netherlands. About 10 years ago he entered the world of information security as cryptographer and expanded his knowledge in the field of information security, broadening his horizon. He owns the company Onyx Cybersecurity, which focuses on information security solutions ranging from ISO27000 preparation to technical solutions.

Dirk Maij currently lives in the Netherlands with his family, but used to live on Curacao until last year.
