

Workshop: A roadmap to agile

Choosing to implement an Agile framework for product development in your project, department or company is just the first step. But how does one get there? How does one achieve all the benefits that the experts tell us Agile will bring? How to avoid the pitfalls?

This workshop aims to provide you with a roadmap to support the implementation of Agile. Together we will explore the steps to take and decisions to make. We will do this using Scrum, the most popular Agile framework, as an example. By the end of the workshop you will have a good idea of how to go about a successful implementation of Agile.

Judith Goudberg

With 30 years of experience in the field and about 18 years of experience as a project/program manager, Judith discovered Agile Scrum in 2006. She was immediately interested, applied some of the Scrum rules to the project she was managing at the time and for the first time experienced the benefits of being Agile.

In 2011 she made the switch to Scrum coach and trainer. She was trained and certified as a Scrum Master and Scrum Product Owner.

When she started coaching teams and company's through their transition to Scrum she discovered that her first implementation of Scrum had hopelessly flawed. This realization led to a quest to find the best way to implement Scrum in particular and Agile in general.
