

## Security Architecture in Cloud First Organization

In this session Robert will talk about Identity Focused Cloud First approach to IT, security and compliance, and why organizations are adopting Cloud cybersecurity strategies. We'll walk through key security concepts for Identity Focused Cloud First approach, and we'll delve into these concept's architecture and execution strategy in Microsoft Office 365 and Azure environments.

And we'll talk about: What could possibly go wrong?

### Robert Brzezinski MBA, CHPS, CISA, CISM

Robert provides subject matter expertise for information privacy, security and regulatory compliance (e.g. HIPAA) for small and medium size organizations. In addition to comprehensive risk assessments and vulnerability and policy compliance scans, Robert creates risk management plans, and IT/security strategies to manage organization's risk exposure more effectively.

Robert focuses on cloud productivity and cybersecurity technologies, including Office 365 and Azure security tools and how we can use these technologies to protect the organizations and users better, how to streamline and automate IT operations, improve and de-duplicate security, compliance and auditing efforts, and put better cybersecurity, compliance and IT strategy in place.

Over last few years Robert presented on risk management, security and cloud security topics at various ISACA events including CSX 2017, Cloud Security Summit, ISACA Ohio Chapter meetings, Central Ohio InfoSec Summit 2016-2018, AHIMA Annual Conventions and/or Privacy, Cybersecurity and Information Governance Institute 2015-2018..
